UBA Focusing Area Mapping with SDG and Justification

SDG Focus: SDG 6 - Clean Water and Sanitation.

Goal 6: Clean Water and Sanitation

The project focuses on improving access to clean water and sanitation through community-driven initiatives that ensure sustainable water management practices and hygiene awareness. It includes the installation of water filtration systems, the promotion of sanitary practices, and the creation of local water committees to maintain these systems. The initiative emphasizes a collective approach to clean water, sanitation, and health education, fostering a healthier environment for all.

6.1 – Achieve universal and equitable access to safe and affordable drinking water for all.

The project ensures that all households in Nedungadu have access to clean, safe drinking water by installing water purification systems and maintaining local water sources. It also educates the community on water conservation and sanitation practices, aiming to reduce the incidence of waterborne diseases.

6.2 – Achieve access to adequate and equitable sanitation and hygiene for all, and end open defecation, with special attention to the needs of women and girls and those in vulnerable situations.

Through the project, the village will be equipped with proper sanitation facilities, including toilets for every household, and the promotion of hygiene practices. Women and girls are given particular attention to ensure their dignity and health needs are met, while also working to eliminate open defecation, creating a cleaner, safer environment for all members of the community.

6.3 – Improve water quality by reducing pollution, eliminating dumping, and minimizing release of hazardous chemicals and materials.

The initiative includes a strong focus on reducing water pollution by educating villagers on the dangers of waste dumping and the importance of protecting local water bodies. It encourages the adoption of eco-friendly practices and proper waste management to improve the quality of water sources and safeguard public health.

INTRODUCTION

Rural development has always been a crucial focus in India's journey toward becoming a self-reliant and inclusive nation. The government of Tamil Nadu, along with central authorities, has launched a wide range of welfare schemes aimed at empowering youth, improving employability, supporting entrepreneurs, and uplifting underprivileged communities. Programs like TNSkill, Naan Mudhalvan, Tamil Pudhalvan, TN Velaivaippu, StartupTN, NSIC, and DIC offer valuable opportunities such as free training, placement assistance, entrepreneurship funding, and preparation support for competitive exams like TNPSC and UPSC. However, in many villages such as Nedungadu in Karaikal District, awareness about these schemes remains significantly low.

Nedungadu is located near the Tamil Nadu–Andhra Pradesh border and is home to hardworking people, including farmers, students, and blue-collar workers. While many residents now own Android phones and televisions, they still lack proper updates about available government support. Language barriers, lack of localized communication, and low digital literacy further prevent them from exploring or benefiting from these schemes. Many youth complete their education but end up working in unrelated or low-paying jobs due to a lack of proper guidance and exposure to career-building resource.

This report aims to address this gap by proposing a hybrid solution that uses accessible technologies and Tamil-language communication to bridge the information divide. Through a community-based awareness system—including digital groups, IVR calls, mobile awareness vans, and trained local volunteers—this initiative hopes to connect the people of Nedungadu with valuable government schemes and help them build brighter futures.

Objectives of the Project – Jal Jeevan Mission (Water Access and Sanitation)

The primary objective of this project is to support the goals of the Jal Jeevan Mission by ensuring universal access to clean and safe drinking water in rural areas through a community-centric, tech-supported awareness and action plan. The initiative aims to empower villagers with knowledge, infrastructure support, and behavioral change campaigns to promote water conservation, sanitation, and hygiene practices.

Specific Objectives:

- 1. Ensure Safe Drinking Water Access**

To facilitate the provision of piped water supply to every rural household, ensuring safe and adequate drinking water through sustainable sources and regular monitoring.

- 2. Promote Water Conservation Awareness**

To educate the community about the importance of water conservation, source sustainability, and the responsible use of water through campaigns, workshops, and local outreach programs.

- 3. Inclusive Communication Strategy**

To build awareness through IVR calls, SMS alerts, and mobile apps in local languages (e.g., Tamil) to ensure information reaches all villagers, including those with low digital literacy or limited access to technology.

- 4. Community-Led Sanitation and Hygiene**

To promote hygiene and sanitation by educating families on the importance of clean water usage, safe storage practices, and toilet usage, with special focus on women and school children.

- 5. Introduce Local Water Champions**

To train and deploy *Jal Sahelis* or *Water Ambassadors* from the community who will serve as frontline agents to spread awareness, monitor tap connections, and report maintenance issues.

- 6. Build Real-Time Tracking and Feedback System**

To develop a centralized dashboard for monitoring water supply status, household coverage, and community feedback to ensure transparency, accountability, and timely issue resolution.

VILLAGE PROFILE – Nedungadu

Nedungadu is a small rural village situated in the Karaikal district of Tamil Nadu, close to the Andhra Pradesh border. The village faces significant challenges when it comes to access to clean drinking water. Many households still depend on shared public taps or open wells, which are often unreliable, especially during the summer months. While a few homes have individual connections, inconsistent water supply and poor infrastructure remain major issues. Seasonal variations and over-dependence on rain-fed sources make water scarcity a recurring concern. The residents of Nedungadu, primarily middle-class families, small-scale farmers, and private-sector workers, often spend hours collecting water—particularly women and school-going children, who bear the brunt of this burden. Limited awareness about safe water storage, sanitation, and hygiene practices further increases the risk of waterborne diseases, especially among children and the elderly.

Despite the government’s Jal Jeevan Mission efforts, the lack of localized awareness, poor digital communication, and minimal community engagement have slowed down adoption and participation. Additionally, the absence of water management training and community-level monitoring systems makes it difficult to maintain the existing infrastructure or report issues promptly. The village urgently needs a coordinated awareness and action plan to ensure clean water access for all and promote sustainable usage and hygiene practices.

Although the use of Android smartphones and televisions has increased in Nedungadu, **awareness about essential government programs like the Jal Jeevan Mission** remains very limited. While the village has basic internet access and moderate transport

connectivity—with Chennai being the nearest major city—information about safe water practices, household tap connections, and sanitation initiatives has not effectively reached the community.

Nedungadu has a population of around **2,500 to 3,000 people**, with a large proportion of **young individuals and school-going children**. The **gender ratio is nearly balanced**, but a noticeable gap persists in literacy levels. The **overall literacy rate is 64.04%**, with **male literacy at 72.96%** and **female literacy at 55.23%**. This literacy gap significantly impacts **awareness and adoption of clean water and sanitation practices**, particularly among women—who are often the primary water collectors for households.

Village Demographics – Amaramabedu	
Parameter	Details
Total Population	2,400 people
Male Population	1,230 male etc
Female Population	1,170 female
Gender Ratio	65%
Overall Literacy Rate	65%
Female Literacy	73%
Youth Population	680 individuals
Households	Approx, 540
Primary Occupation	Agriculture, Daily Wage, Private Jobs
Devices in Use	80% Android phones, 20% feature phones

Without focused community engagement and education, many residents remain unaware of the long-term health risks posed by unsafe water and the benefits of sustainable water management. There is a pressing need for localized campaigns, water literacy programs, and inclusive communication strategies to ensure that **every household in Nedungadu can access safe, reliable drinking water** and understand the importance of hygiene and conservation.

Access to clean drinking water and sanitation in Nedungadu remains a significant challenge. While efforts are being made through rural development programs, a large portion of the village still relies on **shared taps, open wells, and water tanks**, many of which provide water only on specific days or during limited hours. The **absence of household tap connections** in many homes, coupled with **unreliable supply and poor water pressure**, forces residents—especially women and children—to spend considerable time fetching water.

Sanitation facilities are also limited, with several households lacking proper toilets or drainage systems. During the monsoon season, stagnant water and poor sewage flow create additional health hazards. Although the **government has initiated sanitation drives**, the impact is minimal due to lack of awareness and community participation.

Educational institutions in the village do not offer water literacy or hygiene education, and students often attend schools with limited or non-functional handwashing and toilet facilities. These gaps not only affect health but also school attendance, especially for adolescent girls.

Healthcare facilities are basic, and waterborne illnesses remain a common issue, particularly during summer months when water sources are strained. The local **Primary Health Center** can handle minor ailments, but for serious conditions linked to unsafe water or poor sanitation, residents must travel to Tiruvallur or Chennai.

Although many households now own smartphones and televisions, **digital literacy around health, hygiene, and water safety remains low**. Poor mobile signal—often

switching to Andhra Pradesh towers due to the village's border location—adds to the communication gap.

Overall, while infrastructure and awareness are gradually improving, **Nedungadu still requires focused interventions under the Jal Jeevan Mission**. A **tech-enabled and community-led awareness system**—supported by local volunteers and real-time monitoring—can play a crucial role in ensuring every household gains **access to safe, reliable drinking water and proper sanitation**, ultimately enhancing the health and dignity of the village community.

SOLUTION FOR RURAL SCHEME AWARENESS

To address the widespread lack of awareness about **safe drinking water, sanitation practices, and the Jal Jeevan Mission** in the rural village of Nedungadu, a comprehensive and inclusive system named "**WaterBridge**" is proposed. This solution is thoughtfully designed to bridge the gap between rural communities and critical water supply and sanitation resources, ensuring that every individual—irrespective of their education level, language fluency, or access to technology—can understand, demand, and benefit from the government's water and sanitation initiatives. By combining user-friendly digital tools with grassroots-level outreach and personalized support, **WaterBridge** aims to empower villagers through awareness and action. Its modular design makes it not only ideal for Nedungadu but also adaptable for other water-stressed rural areas across the country.

3.2.1 MULTILINGUAL AWARENESS PLATFORM

The first part of the solution involves creating a centralized information platform in **Tamil** that promotes safe water practices, sanitation habits, and updates about Jal Jeevan

Mission activities.

- For smartphone users, water safety tips, construction updates, and scheme benefits will be shared via **WhatsApp and Telegram** channels with daily updates, short videos, and infographics.
- For non-smartphone users, **SMS alerts in Tamil** will deliver important water supply schedules, hygiene reminders, and helpline numbers.
- A lightweight Android app with **voice-guided navigation, large fonts, and simplified Tamil language** will be developed to help semi-literate users easily access clean water and sanitation information.

3.2.2 IVR (INTERACTIVE VOICE RESPONSE) SYSTEM

An **IVR-based system** will be set up for residents using basic button phones.

- By calling a **toll-free number**, villagers can listen to **recorded Tamil voice messages** about water conservation, safe storage practices, sanitation guidelines, and updates regarding household tap connections.
- Weekly updates will keep the information fresh, and villagers can navigate by repeating or selecting different topics without needing internet access.

3.2.3 DIGITAL LINK OFFICERS (DLOs)

Digital Link Officers (DLOs) — young, trained volunteers from the village — will be appointed.

- They will conduct **door-to-door outreach**, educate families about safe drinking water practices, guide them on **tap water connection applications**, and resolve doubts related to sanitation facilities.
- DLOs will also collect feedback on water supply quality and community needs to help government agencies better address local challenges.

3.2.4 AWARENESS VANS AND QR-ENABLED POSTERS

Mobile awareness vans will visit different parts of Nedungadu, broadcasting water safety jingles, educational videos, and success stories on **LED screens and speakers**.

- QR-code enabled **posters and stickers** will be placed at common public locations (bus stops, shops, temples) for easy scanning with Android phones, providing villagers with instant access to Jal Jeevan Mission information and FAQs.

3.2.5 WATER CONNECTION REGISTRATION AND HELP CAMPS

Monthly "**Water and Sanitation Help Camps**" will be organized at community centers, temples, or school grounds.

- Villagers can receive **assistance in applying for household tap connections**, updating documents, lodging complaints about supply issues, and learning about sanitation best practices.
- Special emphasis will be given to **women-headed households, farmers, and marginalized communities** to ensure universal access.

3.2.6 CENTRAL SERVER AND ANALYTICS DASHBOARD

All outreach activities, user queries, registrations for water connections, and feedback will be stored securely on a **cloud-based database**.

- A real-time **analytics dashboard** will help administrators monitor community engagement, identify water supply gaps, track progress towards 100% household connections, and continuously refine awareness strategies for maximum impact.

CHALLENGES FACED IN RURAL WATER AND SANITATION AWARENESS

Rural development in villages like Nedungadu faces serious hurdles when it comes to ensuring access to clean drinking water and proper sanitation facilities. While government initiatives like the Jal Jeevan Mission aim to provide tap water to every rural household, on-the-ground implementation is slowed by several socio-economic, infrastructural, and informational challenges. One of the primary issues is the lack of awareness among villagers about their eligibility and the benefits of household tap connections, water quality monitoring, and sanitation programs. Even though many families own Android phones or televisions, they rarely receive accurate or timely information about ongoing water-related schemes or health practices. Misinformation, cultural taboos, and limited outreach often lead to low participation in programs meant to improve hygiene and water security.

Language and literacy barriers further compound the problem. Since most residents are educated in Tamil medium and have limited exposure to official communications, they often struggle to understand English-based guidelines or online application procedures for water supply

connections. This leads to delays, missed opportunities, and reduced confidence in using digital platforms for grievance redressal or maintenance requests.

Another challenge is poor infrastructure and inconsistent water supply systems. In many cases, villages experience irregular tap water supply, low pressure, or technical breakdowns—discouraging households from depending on piped connections. Lack of local water quality testing facilities and insufficient community engagement often result in continued reliance on unsafe water sources like borewells or hand pumps.

Additionally, low community involvement and limited behavior change communication contribute to poor sanitation habits, such as improper waste disposal and reluctance to use toilets, especially among certain age groups or communities. Women and children are the most affected, facing health risks due to unclean water and poor hygiene facilities.

To overcome these challenges, a multi-layered and inclusive awareness strategy is necessary—one that combines localized communication, digital tools, human support, and consistent engagement with the rural population.

KEY CHALLENGES IN WATER AND SANITATION AWARENESS (JAL JEEVAN CONTEXT)

1. Lack of Awareness about Water and Sanitation Schemes

Many villagers are unaware of government initiatives like the Jal Jeevan Mission, which aims to provide safe tap water to every household. This communication gap leads to poor participation and underutilization of valuable services.

2. Language and Educational Barriers

Scheme information and instructions are often in English or technical Tamil, making it hard for villagers—especially women and the elderly—to understand. Most have studied in Tamil medium and lack exposure to official terms related to water testing, filtration, or plumbing support.

3. Inadequate Hygiene Practices and Cultural Stigma

Sanitation practices such as handwashing, use of toilets, and waste disposal are often influenced by cultural habits and misinformation. Lack of behavior change communication has resulted in poor adoption of hygienic practices, particularly in marginalized households.

4. Digital Divide and Low Technology Adoption

While smartphones are present in many homes, digital literacy remains low. Residents are often unfamiliar with apps or portals for lodging water complaints, tracking supply schedules, or checking water quality reports.

5. Weak Infrastructure and Irregular Supply

Frequent water supply disruptions, low-pressure taps, or outdated pipelines lead villagers to revert to unsafe sources like borewells and open wells. Poor maintenance and lack of grievance redressal mechanisms worsen the issue.

GOVERNMENT SCHEMES AVAILABLE FOR WATER AND SANITATION IN RURAL DEVELOPMENT (JAL JEEVAN MISSION)

To improve access to clean drinking water and proper sanitation in rural communities like Nedungadu, several government schemes are actively available under two broad categories: water supply and sanitation.

In the water supply category, the Jal Jeevan Mission provides a crucial platform to deliver safe drinking water to rural households through piped water connections. The Swachh Bharat Mission (Gramin) supports rural sanitation by focusing on building toilets and promoting hygiene awareness. Other programs like the National Rural Drinking Water Programme (NRDWP) also play an essential role in ensuring clean water access. The Atal Mission for Rejuvenation and Urban Transformation (AMRUT) aims to improve water infrastructure in urban-rural fringes, which directly benefits the outskirts of rural areas.

1. Water Supply Schemes:

1.1 Jal Jeevan Mission

A flagship scheme by the Government of India to provide tap water to every rural household by 2024.

- Eligibility: All rural households
- Benefits: Piped water connections to homes, regular and safe drinking water supply
- Key Features: Focuses on sustainability, quality monitoring, and ensuring equitable distribution, especially for marginalized sections of society.

1.2 National Rural Drinking Water Programme (NRDWP)

A program to address drinking water issues in rural India by improving water quality and quantity.

- Eligibility: Rural households with limited access to clean drinking water
- Benefits: Provides funding to states for water supply infrastructure and quality monitoring systems
- Focus Areas: Water quality improvement, sustainability, and ensuring availability in remote villages.

1.3 Atal Mission for Rejuvenation and Urban Transformation (AMRUT)

While primarily for urban areas, this scheme also supports water infrastructure development in rural-urban fringes.

- Eligibility: Rural-urban fringe areas and small towns
- Benefits: Provides financial support for urban water supply, including piped water supply systems and sewage infrastructure that also benefit rural outskirts.

2. Sanitation and Hygiene Schemes:

2.1 Swachh Bharat Mission (Gramin)

Launched to ensure the elimination of open defecation and promote sanitation facilities in rural India.

- Eligibility: Rural households with no toilet facilities
- Benefits: Provides financial assistance for toilet construction, behavioral change communication programs for hygiene awareness
- Key Features: Focus on community participation, awareness creation, and making villages ODF (Open Defecation Free).

2.2 Pradhan Mantri Awas Yojana (Gramin) – Sanitation Component

This component ensures every rural household has access to both sanitation and housing facilities.

- Eligibility: Families under the Below Poverty Line (BPL) category
- Benefits: Construction of sanitary latrines along with homes built under the PMAY (Gramin) scheme.

2.3 National Clean Energy Fund (NCEF)

Supports clean sanitation systems and waste management systems that improve hygiene in rural areas.

- Eligibility: Rural local bodies and community initiatives
- Benefits: Funding for constructing community toilets, waste management units, and promoting clean and renewable energy in rural sanitation processes.

3. Water Quality and Conservation Schemes:

3.1 National Water Quality Monitoring Program (NWQMP)

A program aimed at ensuring safe drinking water quality for rural communities.

- Eligibility: Rural areas with contamination issues (fluoride, arsenic, etc.)
- Benefits: Water quality testing, purification solutions, and ensuring safe drinking water
- Key Features: Regular monitoring and feedback mechanisms for water quality improvements.

3.2 Watershed Development Programs

These programs focus on water conservation, improving soil and water management, and increasing water availability through rainwater harvesting.

- Eligibility: Rural communities, especially in drought-prone areas
- Benefits: Financial support for community-based watershed projects, groundwater recharge, and water-use efficiency.

3.3 Catch the Rain Campaign

An initiative under the Jal Shakti Abhiyan focusing on rainwater harvesting and water conservation at the grassroots level.

- Eligibility: Rural communities, schools, and community centers
- Benefits: Promotes rainwater harvesting systems, water storage systems, and watershed management
- Key Features: Awareness programs and technical support for setting up rainwater harvesting systems.

ACTIVITIES IMPLEMENTED UNDER THE JAL JEEVAN MISSION IN NEDUNGADU

The implementation of the Jal Jeevan Mission in Nedungadu involved a series of planned activities aimed at improving access to clean drinking water and promoting sanitation awareness. The following activities were carried out to empower the villagers and ensure that they benefit from the Jal Jeevan Mission and related water supply and sanitation schemes:

1. Community Surveys

A comprehensive survey was conducted to assess the existing water supply, sanitation conditions, and awareness about water-related schemes. This survey helped identify gaps in water access, hygiene practices, and the availability of resources. Key metrics gathered included:

- Water Supply Access: Percentage of households with piped water connections
- Sanitation Coverage: Availability of toilets in households
- Awareness of Jal Jeevan Mission: Familiarity with water conservation practices and government schemes
- Health Indicators: Issues related to waterborne diseases and sanitation problems

2. Awareness Campaigns

A key component of the program was raising awareness about the Jal Jeevan Mission, safe drinking water, and sanitation practices.

These campaigns included:

- Public Awareness Sessions: Regular meetings in village halls, schools, and community centers to inform villagers about water conservation methods, waterborne diseases, and the benefits of the Jal Jeevan Mission.
- Poster and Pamphlet Distribution: Printed materials detailing water-saving techniques, how to access water-related government schemes, and hygiene practices were distributed in common areas like village squares and markets.
- Radio and Television Announcements: Collaborating with local radio stations and community TV networks to broadcast important information regarding the Jal Jeevan Mission and sanitation practices.

3. Water Conservation Workshops

To address water scarcity and encourage better water management, workshops were organized to teach villagers sustainable water practices. These workshops included:

- Rainwater Harvesting Training: Practical sessions on setting up rainwater harvesting

systems for households and community spaces.

- **Water-Saving Techniques:** Teaching villagers how to use water efficiently, reduce wastage, and implement basic water conservation measures in everyday life.
- **Community Water Management:** Educating about collective water resource management, ensuring equitable water distribution, and maintaining village wells and water tanks.

4. Sanitation and Hygiene Assistance

Once villagers understood the importance of clean water and sanitation, assistance was provided to implement proper hygiene and sanitation practices. Activities included:

- **Toilet Construction Assistance:** Helping households build individual or community toilets under the Swachh Bharat Mission (Gramin), with financial and technical support.
- **Step-by-Step Guidance for Scheme Applications:** Volunteers assisted in filling out application forms for government schemes related to water supply and sanitation.
- **Health and Hygiene Education:** Conducting sessions on hygiene practices like handwashing, safe drinking water storage, and the proper disposal of waste.

5. Local Leader Involvement

Local leaders were trained to be Water and Sanitation Champions, enabling them to spread awareness and assist villagers in accessing water schemes and sanitation facilities. These leaders:

- Helped ensure the knowledge gained from the workshops and campaigns remained within the community.
- Acted as points of contact for villagers seeking further assistance with water supply issues, sanitation facilities, or the application process for government schemes.

6. Job and Entrepreneurial Opportunities

A crucial part of the project was promoting entrepreneurship and job creation related to water and sanitation. Activities included:

- **Entrepreneurship Awareness Sessions:** Introducing villagers to government-backed schemes that could help them start businesses related to water management, sanitation products, or hygiene services.
- **Job Fair and Placement Drives:** Organizing local job fairs focusing on hiring for positions in water management, sanitation, and related sectors.
- **Skill Development Workshops:** Conducting training on skills required in the water supply and sanitation industries, such as plumbing, water testing, and waste management.

7. Infrastructure Support

Improving water infrastructure was another key activity. The project worked to enhance:

- **Water Supply Infrastructure:** Supporting the installation of piped water systems and ensuring that water is available to every household.
- **Public Water Stations:** Establishing community water points with clean drinking water in areas without piped connections, ensuring equitable distribution.
- **Digital Kiosks for Water Access:** Setting up kiosks with water quality testing facilities and providing access to online platforms for tracking water supply issues.

8. Continuous Monitoring and Feedback

To measure the success of the activities and improve ongoing efforts, continuous monitoring was carried out through:

- **Community Feedback Surveys:** Regular surveys were conducted to gather feedback from villagers regarding water supply quality, sanitation facilities, and the effectiveness of government schemes.
- **Impact Assessment:** Tracking the number of households receiving piped water, the success rate of toilet construction, and the improvement in sanitation and water access.

9. Future Sustainability

To ensure the sustainability of the activities after the project's completion, partnerships with local organizations, government bodies, and private stakeholders were established. These partnerships include:

- **Sustainability Plans with Local Schools:** Collaborating with educational institutions to integrate water conservation and sanitation practices into the school curriculum.
- **Maintenance Plans for Water Infrastructure:** Ensuring community-based management of water systems, where local leaders are trained to maintain the infrastructure and oversee regular water quality checks.

CONCLUSION

In conclusion, the village of **Nedungadu**, like many rural communities, faces a set of challenges that impede its overall growth and development. These include limited access to clean drinking water, inadequate sanitation facilities, poor digital connectivity, and a lack of awareness about government welfare schemes. Most of the population depends on agriculture as their primary occupation, with a significant portion relying on seasonal farming and low-paying, unskilled labor jobs during the off-season.

Despite these challenges, the people of Nedungadu are resilient, and many are eager to improve their living conditions. Moreover, gaps in awareness of government initiatives, digital literacy, and clean water access hinder the potential for sustainable development.

To address these gaps, we have proposed the "**Jal Jeevan Empowerment Initiative**", a targeted approach designed to improve access to clean drinking water, promote sanitation awareness, and create opportunities for economic growth. By focusing on water conservation, infrastructure support, digital literacy, and job creation, the initiative will help villagers better understand and access government schemes, while ensuring long-term sustainability.

Through a combination of awareness campaigns, infrastructure improvements, and local leadership involvement, the **Jal Jeevan Empowerment Initiative** will ensure that the villagers of Nedungadu can access the benefits of programs like **Jal Jeevan Mission**, **Swachh Bharat Mission**, and other relevant schemes. By promoting clean water access, improving sanitation facilities, and providing skill development opportunities, this initiative will pave the way for a healthier, more prosperous future for the village.

Our Journey in Nedungadu(Survey → Water Access Improvement → Awareness Campaign → Community Engagement → Long-Term Sustainability)
